

For better efficient AdPower

Dec 2014

Tomizawa & Co., Ltd

Dear AdPower customers

We advise your 'better efficient AdPower'.

- You will feel the lighter accelerator. The faster response of the engine and the same engine power with smaller pressure to the accelerator means the first sign of the effect.
- Please don't over-press on the accelerator because you feel the lighter accelerator. The lighter accelerator can lead the saving fuel.
- Please be careful to control the speed and check the Tachometer. You can recognize the less revolutions of the engine despite of the same speed.
- AdPower can coast along a road so check the speed and press on the accelerator only as needed.
- You had better shift gear earlier than before installing AdPower because AdPower can make more powerful.

If you have any questions, please don't hesitate to ask us.
